ENGLISH FOR DENTISTS IN PRACTICE

PART TWENTY-EIGHT: DIASTEMA Part One – answers

VOCABULARY PRACTICE

Complete the sentences with linking words from the table

- 1. A diastema is a space or gap between two teeth. It appears most often between the two upper front teeth. **However**, gaps can occur between any two teeth.
- 2. Diastema can be sometimes categorised as false and true one. **As far as (false diastema) is concerned**, it is formed on the stage of the replacement of milk teeth with permanent ones.
- 3. **In comparison/On the contrary** true diastema is formed when there was a replacement of the tooth itself and if it does not disappear by itself, a correction by orthodontist is required.
- 4. Habits can lead to gaps between the teeth. **For instance** thumb sucking tends to pull the front teeth forward, creating gaps.
- 5. Children may have temporary gaps as they lose their baby teeth. **Generally** these spaces close as the permanent teeth reach their final positions.
- 6. If the gap is caused by periodontal disease, then **obviously** periodontal treatment by a dentist or periodontist is necessary.
- 7. Many European patients want to have diastema corrected. **On the contrary** in other countries, for example, Ghana or Nigeria, diastemata are regarded as being attractive and a sign of fertility, and some people have even had them created through cosmetic dentistry.
- 8. Diastemas usually cause no complications to your dental health, **still/however** many people choose diastema closure for cosmetic purposes.
- 9. **In most cases**, the treatment of diastema can be performed with the help of orthodontic or complex methods, with the help of surgery and further movement of the teeth using special tools.
- 10. Diastema is an adjustable dental condition and **that is why/therefore** patients may be recommended braces, Invisalign or dental bands.
- 11. Sometimes incisors are too small **therefore/that is why** dentist may suggest widening them by using crowns, veneers or bonding.
- 12. Orthodentic treatment seems to be a good option for diastema correction, **nevertheless** one problem with it is relapse.
